

Serial No. 10/734,429

AMENDMENT TO THE SPECIFICATION

Please replace pending paragraph 28 with the following amended paragraph:

Figure 5 shows an alternative open "circle" design of the transistor for use in a display device. In an open design, the drain is not completely encircled by the channel. A pixel 508 addressed by transistor 504 lies between the adjacent gate lines 520, 524 ~~542, 546~~ and adjacent data lines 512, 516 ~~520, 524~~. The transistor includes a channel 528 where the channel width shown as dotted line 532 exceeds a dimension of the pixel addressed by the transistor.
